

If you have just received an update from Professional Document Systems via email and Hightail, please follow the instructions below to update your Genx2005 program. This update installs the latest version of GenX2005 and supersedes any previous versions. Please click on "**Download**". On the next screen, click on "**Download**" again - choose to SAVE (not RUN) it when a "**Save as**" screen pops up. We recommend saving this update file to your desktop. If it asks you to overwrite an existing file, replace it. After the file completely downloads, you must find UpdateGenX2005.exe (probably on your desktop or wherever your browser saved it to). Right-click on it, click on properties, "Unblock", "Apply", and "OK". Run Update GenX2005.exe by double-clicking on it. Some systems may require you to run the update as an administrator. When the update is complete, read the directions, and click on "Finish". The ABOVE update process must be done on ALL computers that are running our software. Next, as indicated, make sure no one in your office is in our program. Then, on any one (1) computer, left-click on the Windows Start Button, go to programs, click on the GenX folder, and run both "Update Data Structures" and "Update Title Rates".
